

Welcome to the workshop, *Typesetting a Document in L^AT_EX*. For this workshop we will be using an inclusive program to manage editing of files and processing of documents. This program is different depending on the platform of your computer and the protocol to set up your machine are listed below. If you already have a preferred solution (or are using Linux) by all means use that instead.

1 Windows

1. visit <http://www.miktex.org/download>
2. download and run the installer
3. launch TeXworks (you should see a text editor appear)

2 Mac

1. visit <http://www.tug.org/mactex/mirrorpage.html>
2. download MacTeX.pkg and open it up (download took me 10 min)
3. take the default options all the way to install
4. run TeXShop (you should see a text editor appear)
